

Pitwherry Genetics

Part 2 genetics

The unit was restocked (after a full depopulation) with JSR gilts in August 2016 with some JSR 90 in first batch and subsequently all 9T gilts.

High health gilts are purchased from JSR (9T) and enter the separate isolation facility at Westfield, located off the edge of the unit with a separate access road.

Semen is JSR 900 purchased from JSR
